

IRB 101sm

Manchester Grand Hyatt San Diego

November 14, 2018

IRB 101 teaches the fundamentals of human subjects protections through a full-day series of lectures and interactive case discussions. The program begins with a presentation of the historical background, core ethical principles, and regulatory foundation essential for those new to the field and those otherwise seeking to deepen their understanding of IRB work. The course then builds upon this new information through case review and analysis aimed at applying core knowledge in biomedical and clinical research and in social, behavioral, and educational research with both adults and children.

AGENDA
